

Mapping Capacity of Local Industry to Support NPP Project in Indonesia: Current Status

Arie Rahmadi-BPPT

25 Februari 2020

1. Background

3. Future Work

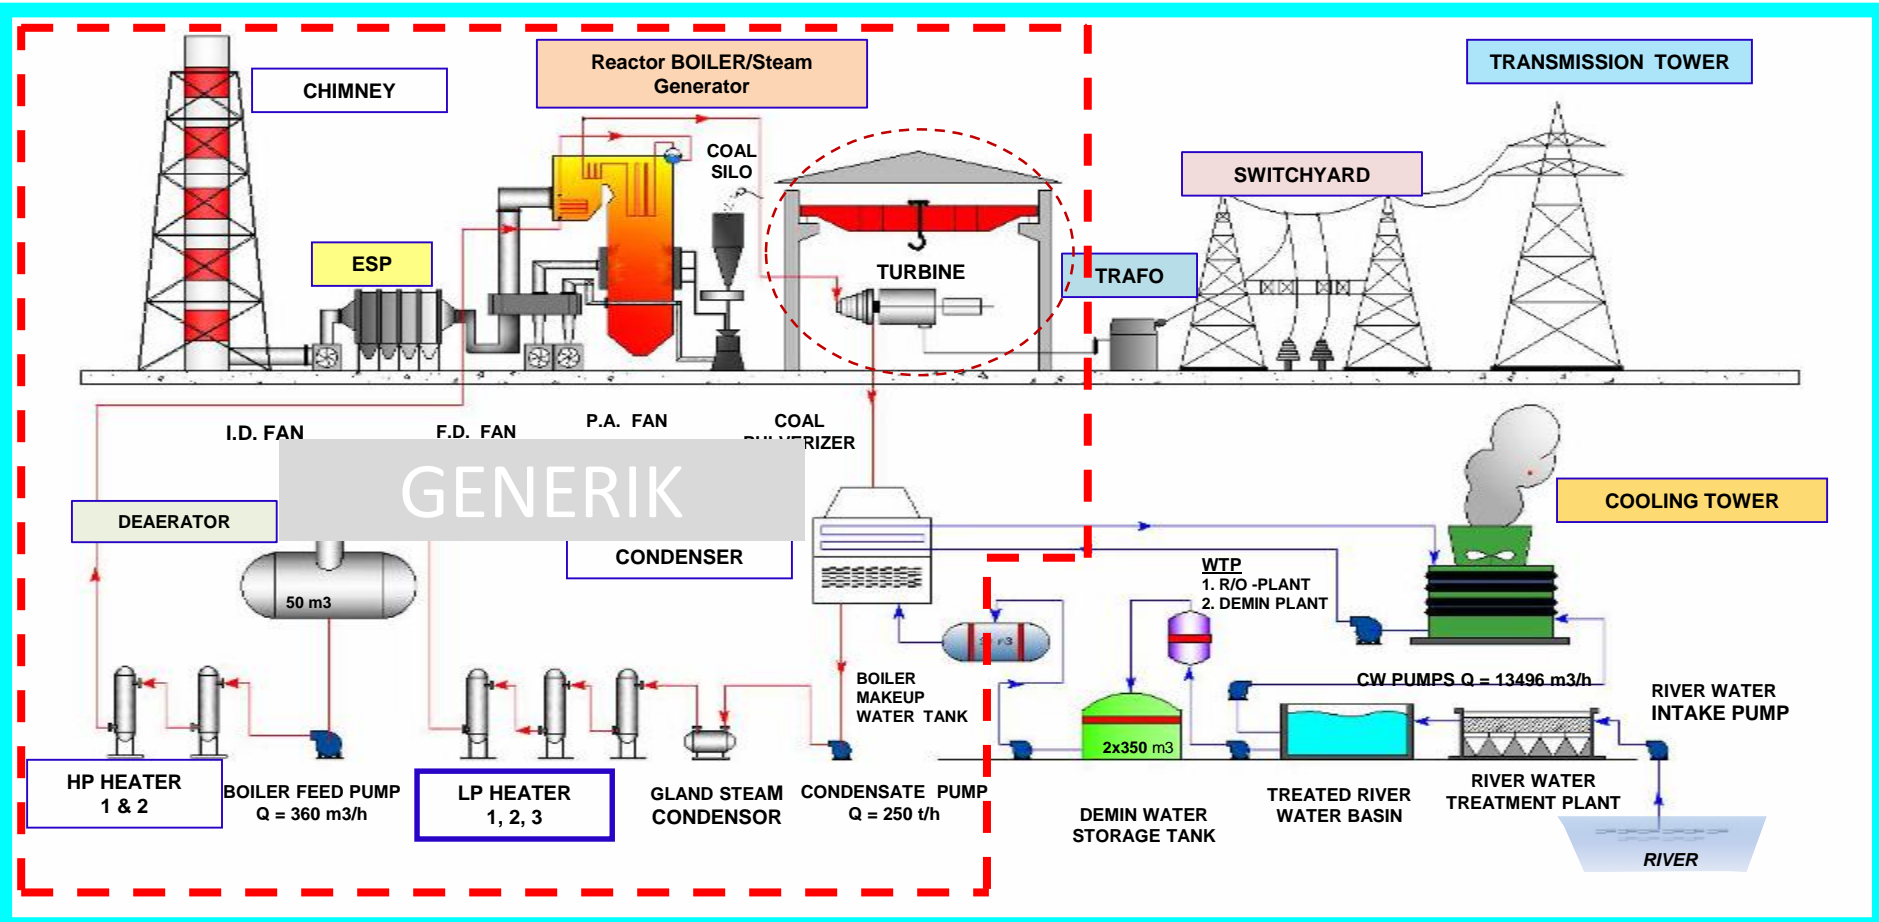

2. Current Mapping results

1.0 Background

- Mapping for Indonesian Industrial capacity to support Electricity project has been carried out since the inception of 35.000 MW in 2014
- Improving local content is viewed as realistic effort to reduce our import and providing employment opportunities
- Business Plan PT PLN has shown that More Power Plant under 100 MW will be built.
- Private firm through IPP will play major role

General Schematic Thermal Power Plant

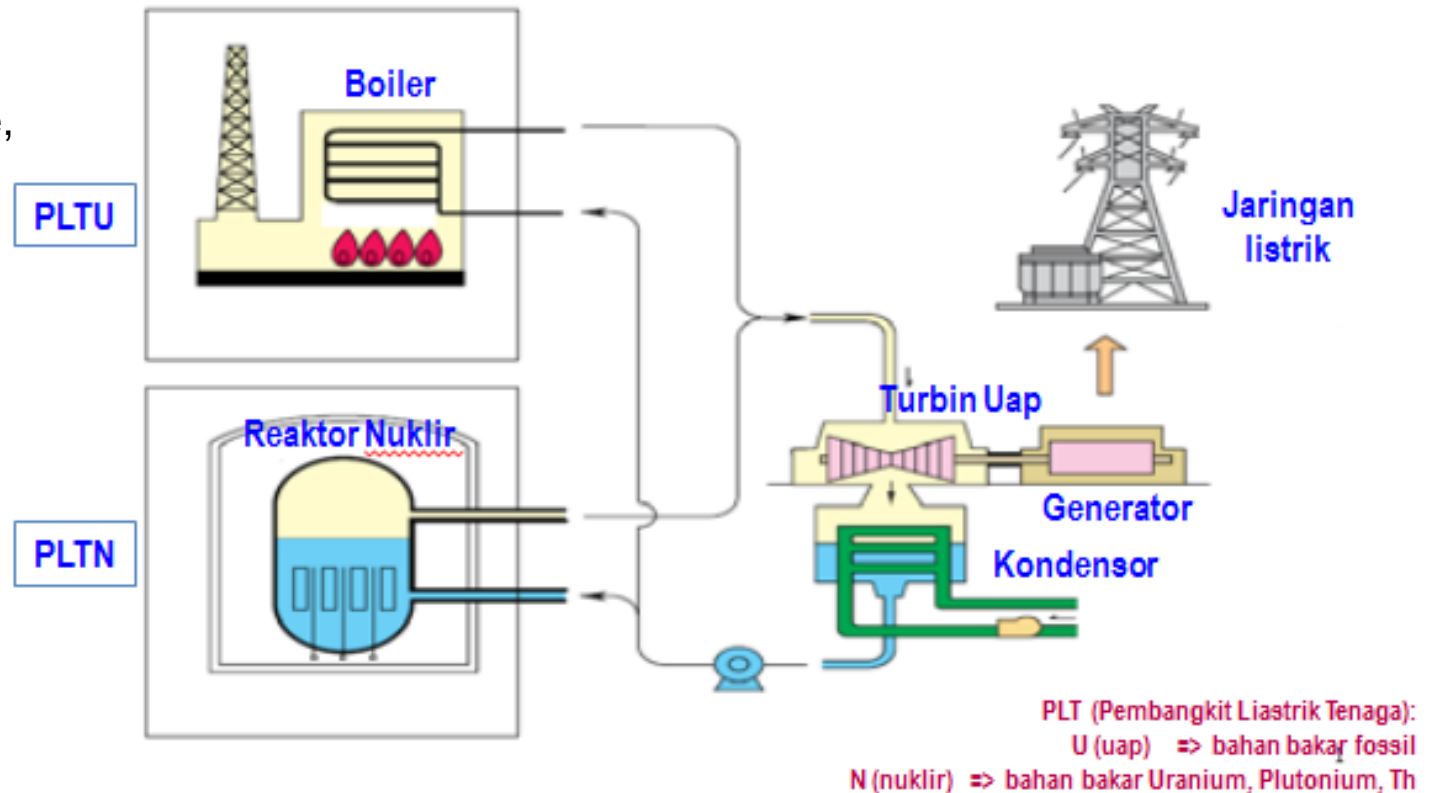

Nuclear Power plant as a solution

The Advent of SMR, Nuclear Power Plant may compete with other based load power plants

Apakah beda antara PLTU dan PLTN ?

Available Technologies:
Hitachi GE, NuScale, ACP 100, Thorcon etc

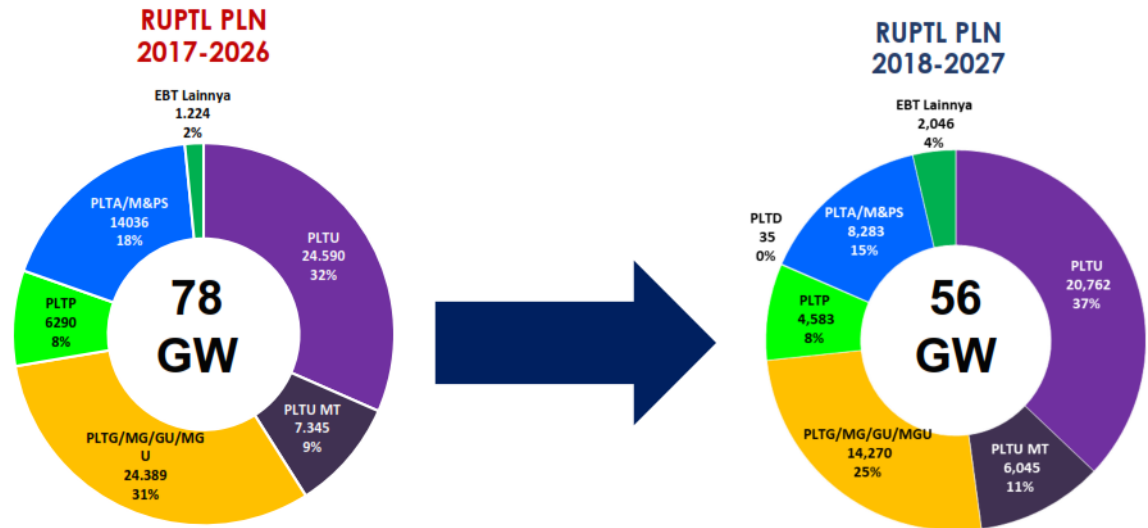

Capacity per Unit Size RUPTL 2016-2025

Number of Unit per capacity class

PLT lain : PLTBM, PLTB, PLTS, PLTSa Unit

Kapasitas	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025	Total
PLTU	32	37	35	61	28	12	5	6	4	4	224
PLTP	2	5	6	13	10	8	6	18	29	31	128
PLTGU	0	8	22	4	0	0	5	2	10	5	56
PLTG/MG	13	51	33	12	15	9	6	3	1	2	145
PLTD	0	0	0	0	0	0	0	0	0	0	0
PLTM	10	18	20	78	19	17	40	6	60	39	307
PLTA	1	2	7	12	7	9	12	30	20	52	152
PLT Lain	43	27	26	17	14	13	3	14	6	10	173
Total	101	148	149	197	93	68	77	79	130	143	1185

Perbandingan Kebutuhan Tambahan Pembangkit 2017 - 2018

Potential Location for NPP Deployment in Indonesia

Bangka Site,
Status FS
Finished
(2011-2013)

West Kalimantan Site,
Site Survey

- Large scale NPP can be developed in Sumatera and Jawa.
- SMR (*Small Modular Reactor*) can be develop in Eastern part of Indonesia, after commercially proven.

Banten Site,
Status: Under
study (2008-
2017)

Muria Site,
Status: Had been evaluated (1991-1996),
Now: monitoring of meteorology and micro
seismic

Source: BATAN

The Case for SMR

Market for power plant per unit size

At least 100 unit <100 MW equal to a business of Rp. 1000 T in ten years to 2025

Number of Unit per capacity class

Unit

Kapasitas	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025	Total
<50 MW	81	130	101	143	70	55	62	42	92	87	863
50-100 MW	8	9	18	19	10	9	7	23	16	24	143
100-150 MW	8	5	14	5	4	1	2	7	8	11	65
150-400 MW	2	3	9	13	6	1	6	7	10	12	69
400-600 MW			2	4	3	1				3	13
600-1000 MW	2	1	5	13		1			4	6	32
Total	101	148	149			68	77	79	130	143	1185

Economic benefit

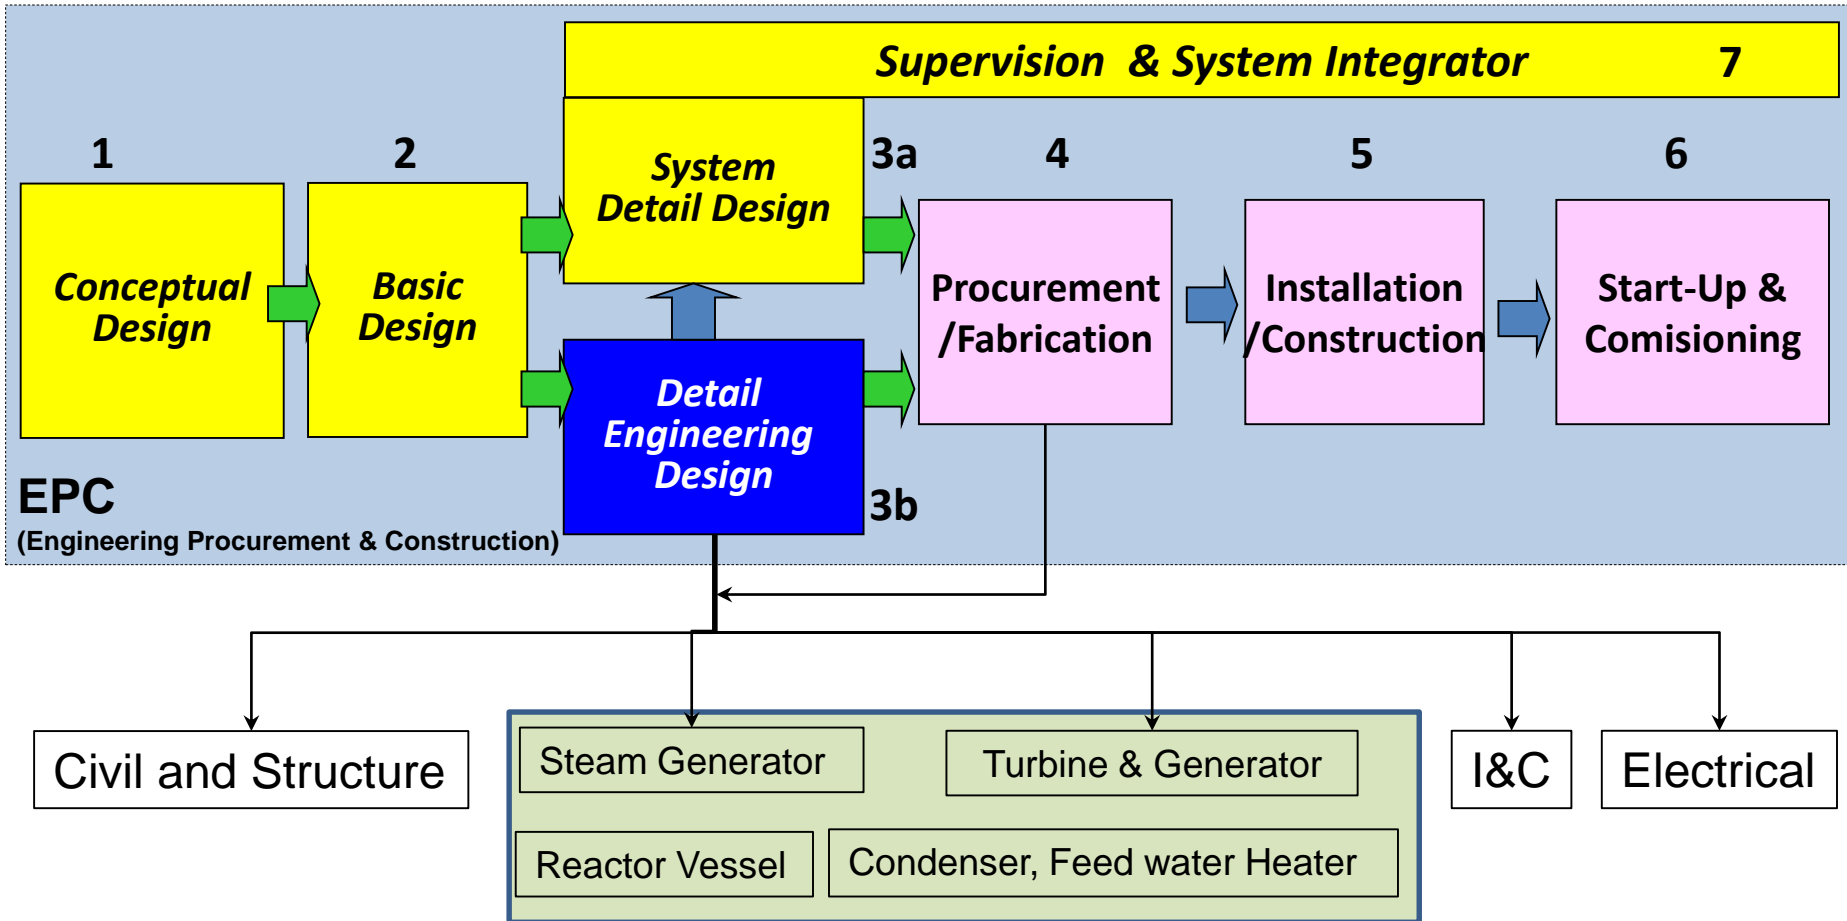

Job Creation , foreign exchange saving (Rp 250T)

Secondary benefit Rp 500T (Steel Industry, Civil, instrument, piping, services, etc)

Niche Market (Renewables)

- Wind Power
- PV
- MSW Poer Plant
- Biomass Power Plant
- Nuclear

Construction of Power Plant

• BY PASS STACK	9	UNITS

PT PAL to Manufacture Turbine

Pabrik Siemens Cilegon Pernah Membuat Pembangkit Listrik 1.600 MW

Pabrik Siemens Cilegon memproduksi kondensator besar dan bagian komponen lain yang siap dipasang pada turbin gas serta uap.

"Pabrik kondensator Siemens Indonesia di Cilegon termasuk pabrik terbesar di dunia, karena pernah membuat pembangkit listrik terbesar untuk pembangkit listrik di Finlandia dengan kapasitas 1.600 MW pada tahun 2007," kata kata Presiden Direktur dan CEO PT Siemens Indonesia, Josef Winter. Menurut Josef Winter, di usianya yang sudah 25 tahun, Pabrik Siemens Cilegon berjanji akan terus meningkatkan produktivitas dalam industri manufaktur lokal di tanah air. **Pabrik Siemens Cilegon memproduksi kondensator besar dan bagian komponen lain yang siap dipasang pada turbin gas serta uap.**

Komitmen Siemens dalam pengembangan kompetensi sumber daya manusia ini bukanlah hal baru. Tahun lalu, Siemens Indonesia telah menyumbangkan peralatan pelatihan **untuk Laboratorium Kelistrikan dan Bengkel Mekanik milik Krakatau di Cilegon, Banten**. Kerjasama dengan perguruan tinggi itu hingga kini masih terus terpelihara.

Saat ini, Pabrik Siemens Cilegon sedang mengerjakan **"Turbin Zero", sebuah kondensator turbin uap untuk sebuah proyek berskala internasional di Arab Saudi**. Sedangkan untuk pasar domestik, dirakit empat unit turbin uap berkapasitas 8,5 MW untuk Proyek PLN di Timika, Papua.

"Pabrik Siemens Cilegon juga akan memperluas portofolio produknya dengan **pembuatan turbin uap kecil untuk mendukung program peningkatan daya listrik pemerintah Indonesia**," kata Josef Winter. RAE.

Barata Indonesia acquired Siemens factory in Cilegon

03 August 2018 15:03

JAKARTA - PT Barata Indonesia (Persero) acquires a turbine component plant owned by PT Siemens Indonesia in Cilegon, Banten.

The acquisition of the plant is intended to improve the company's ability to meet the needs of the power plant spare parts, which has encouraged an increase in domestic component-level usage (TKDN).

Barata has an important role in the electrification program in Indonesia, in line with the government's assignment to the company as coordinator of local power station content program.

"Indonesia must be independent, we can not continuously to buy from abroad continuously. With our own Siemens Factory, we not only can meet domestic needs, but can export as well," said Director of Barata Silmy Karim in the signing of purchase asset agreement at the Ministry of RI IMN as

FEED WATER SYSTEM MODULE

BPPT - WESTINGHOUSE AP600/1000

Modularisation to a particular Start Up Feed Water System. It comprises all mechanical equipment, piping, structure, electrical and instrument to speed up as well as ensuring quality of work.

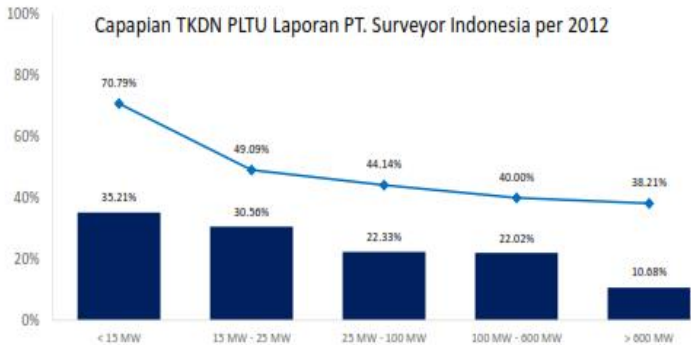

OUTLINE

3. Future Work

Lesson Learn: Local Contents in Power Plant Project

1. Capaian TKDN PLTU (Verifikasi Surveyor tahun 2012)

Catatan:
Berdasarkan laporan verifikasi PT Surveyor Independen dari proyek pembangkit hingga tahun 2012 (hanya memasukan proyek dengan status penyelesaian di atas 80%)

2. Capaian TKDN Pembangkit (Verifikasi Surveyor tahun 2017)

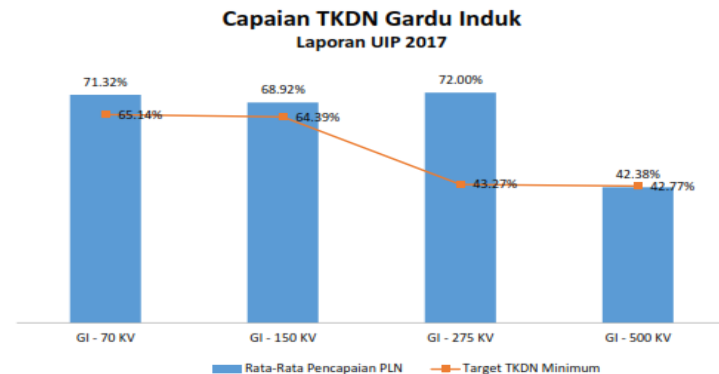

3. Capaian TKDN Transmisi (Verifikasi Surveyor tahun 2012) & 2017 (Belum Verifikasi)

SUTT = Saluran Udara Tegangan Tinggi
kV = Kilo Volt

3. Capaian TKDN Gardu Induk 2017 (Belum Verifikasi oleh Surveyor)

Source:: PLN, 2018

Lesson Learned: 1000 MW Project

MERCHANT SHIPBUILDING

Pengembangan produk kapal niaga yang diarahkan pada pasar di dalam negeri maupun luar negeri. Saat ini, fokus pengembangan adalah untuk mendukung model-model industri pelayaran nasional dan pelayaran perintis bagi penumpang dan barang (cargo), serta mengembangkan kemampuan untuk pembangunan kapal LPG/ LNG Carrier. Kapasitas produksi saat ini mencapai 1.600 ton/bulan atau setara 3 unit kapal/tahun, 2 kapal Tanker 30.000 DWT dan 1 kapal Tanker 17.500 DWT.
